TryHackME – Operation Sliter

CTF – Challenge

RAMYA.R

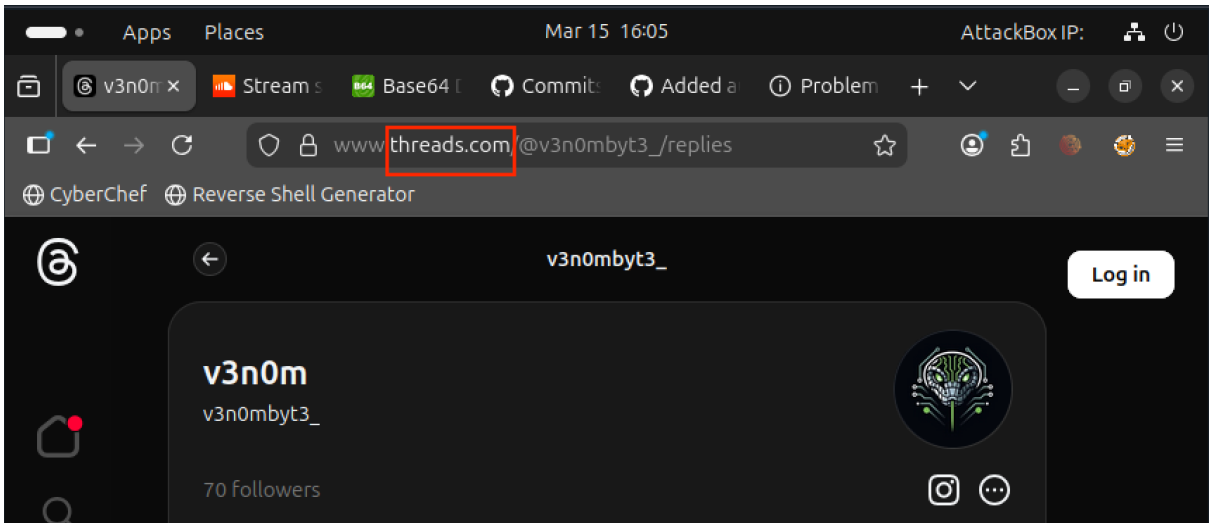
Cybersecurity Engineer – SOC

15 Mar. 26

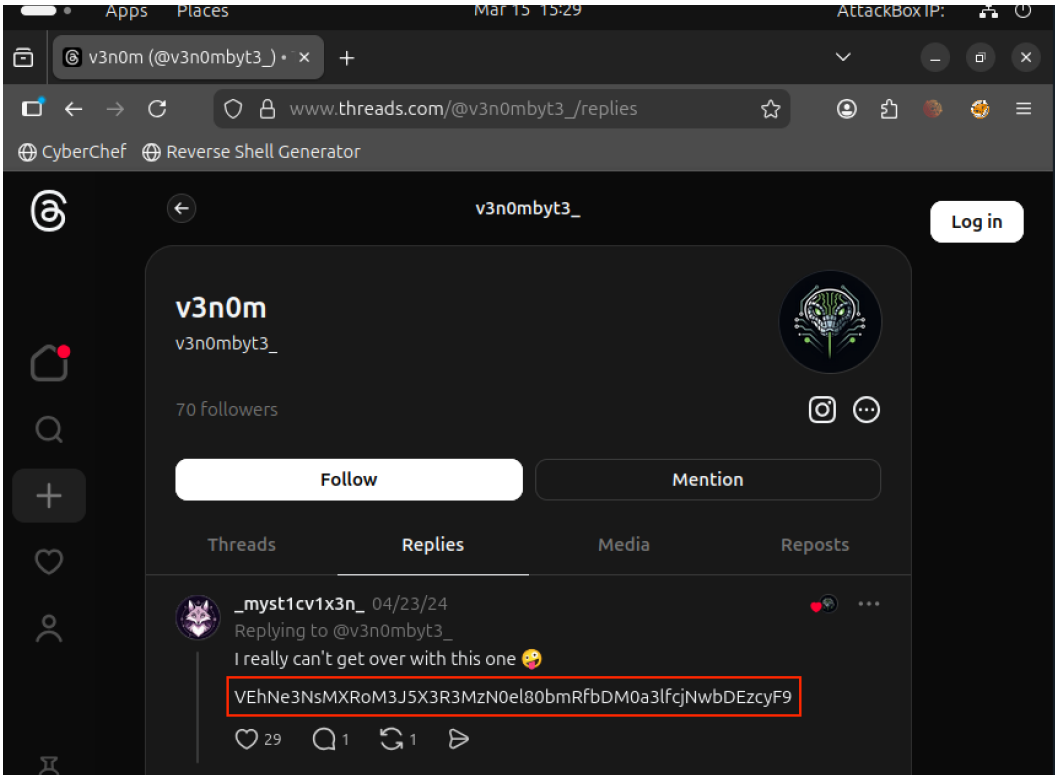
TASK 1 – LEADER:

The Reconnaissance guide that mention to start with the username details search. So the search started in Firefox and found out the answers that are listed below

ANSWER 1 – threads



ANSWER 2 – The hash values are seen in the replies section and the conversion of the hash required base64 decode.



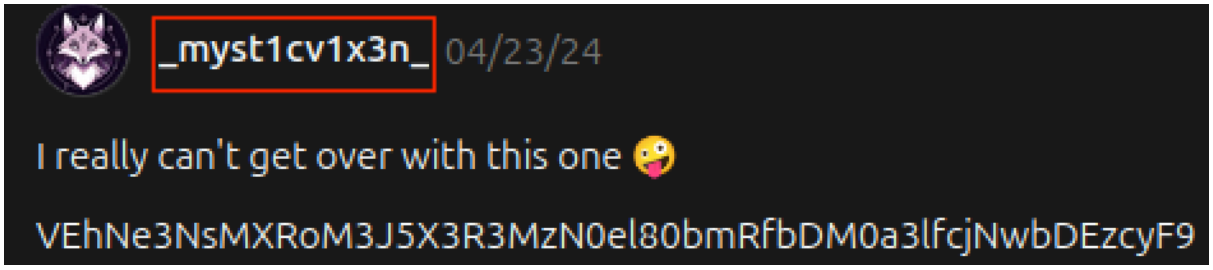
DECODE Decodes your data into the area below

THM{sl1th3ry_tw33tz_4nd_l34ky_r3pl13s!}

TASK 2 – The Sidekick:

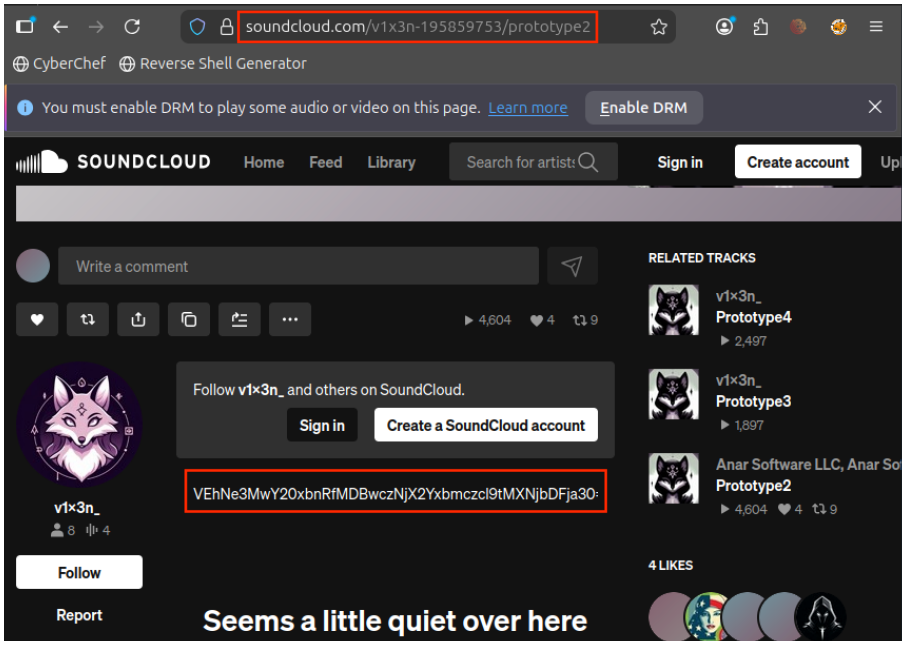
This task also gives the reconnaissance steps to investigate on the second user details and it was found when the flag 1 was found

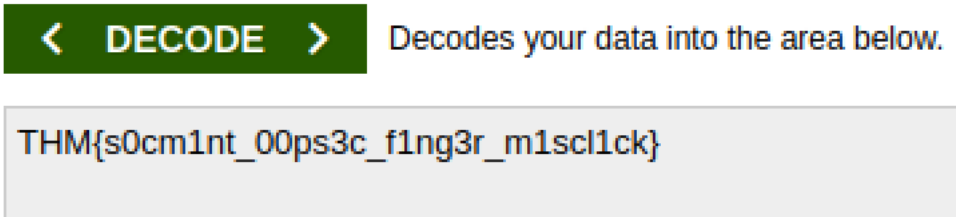
*ANSWER 1 – _myst1cv1x3n_*



ANSWER 2 – Visiting the Instagram page of v3nOmbyt3_ and discovering a real comment, it gives a link – https://soundcloud.com/v1x3n-195859753/prototype

There were 4 prototypes, I investigated all the prototype and the prototype 2 had the flag and converting it to base 64 gave the flag for the sidekick.

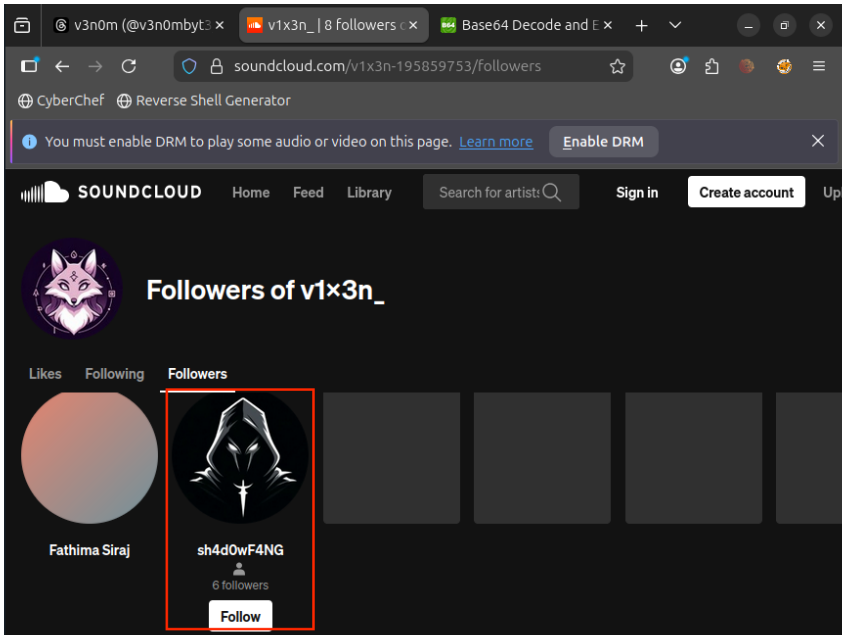




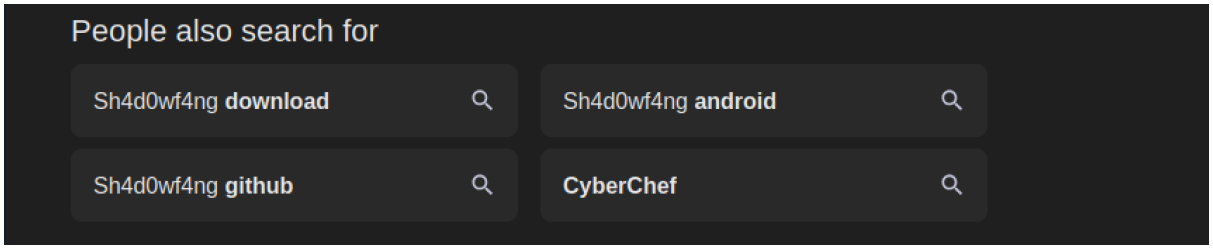
TASK 3 – THE LAST OPERATOR

*Following the reconnaissance guide, the 3rd handler was found in the follower list of v3n0mbyt3_*

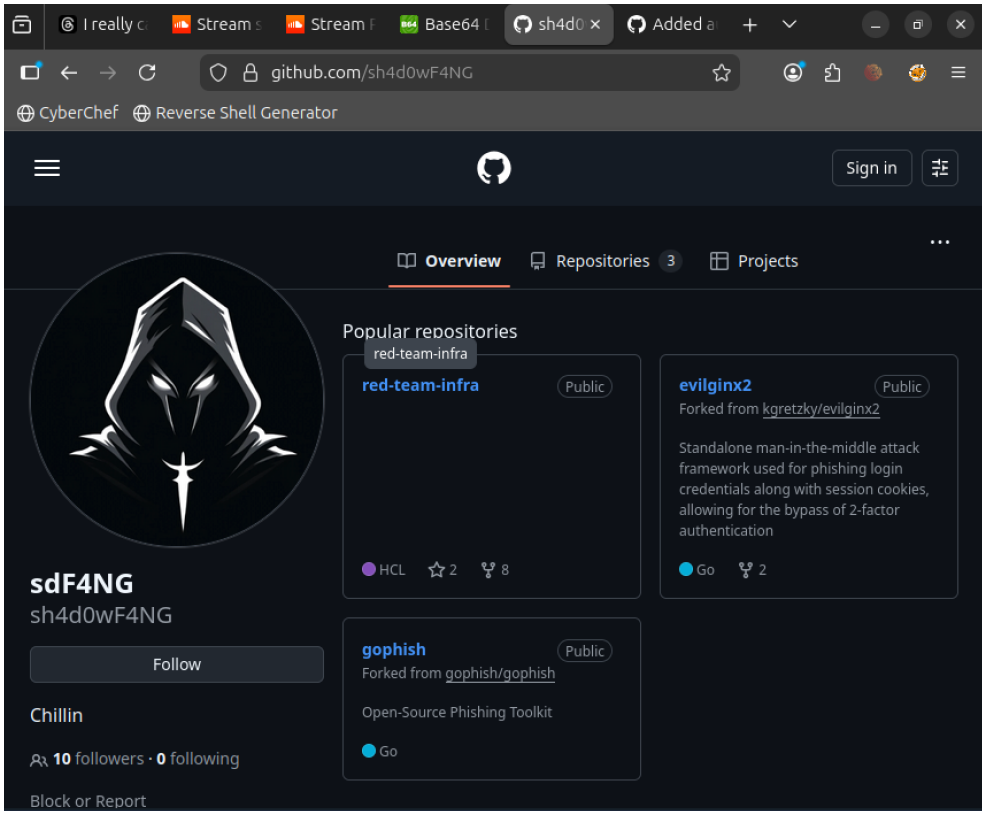
ANSWER 1 – sh4d0wF4NG



ANSWER 2 – GitHub



ANSWER 3 – I investigated the github profile of sh4dOwF4NG and found 3 respos and those had many commits and the least amount of commit was in red-team-infra.



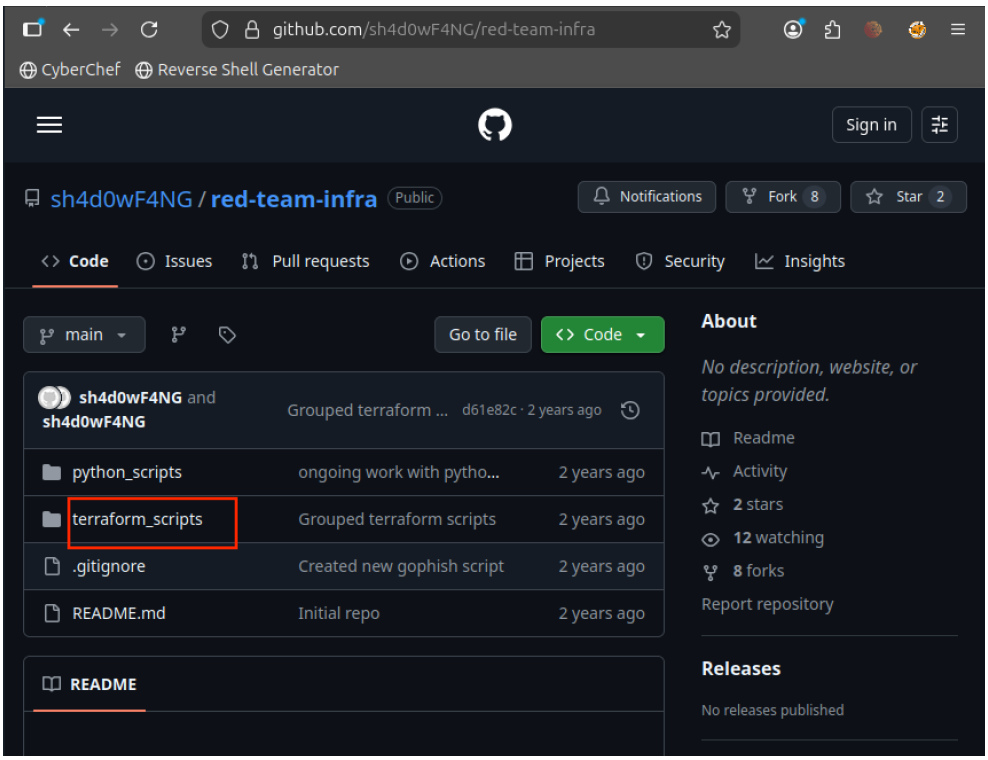
```
FOR SALE

Advanced automation scripts for phishing and initial access!

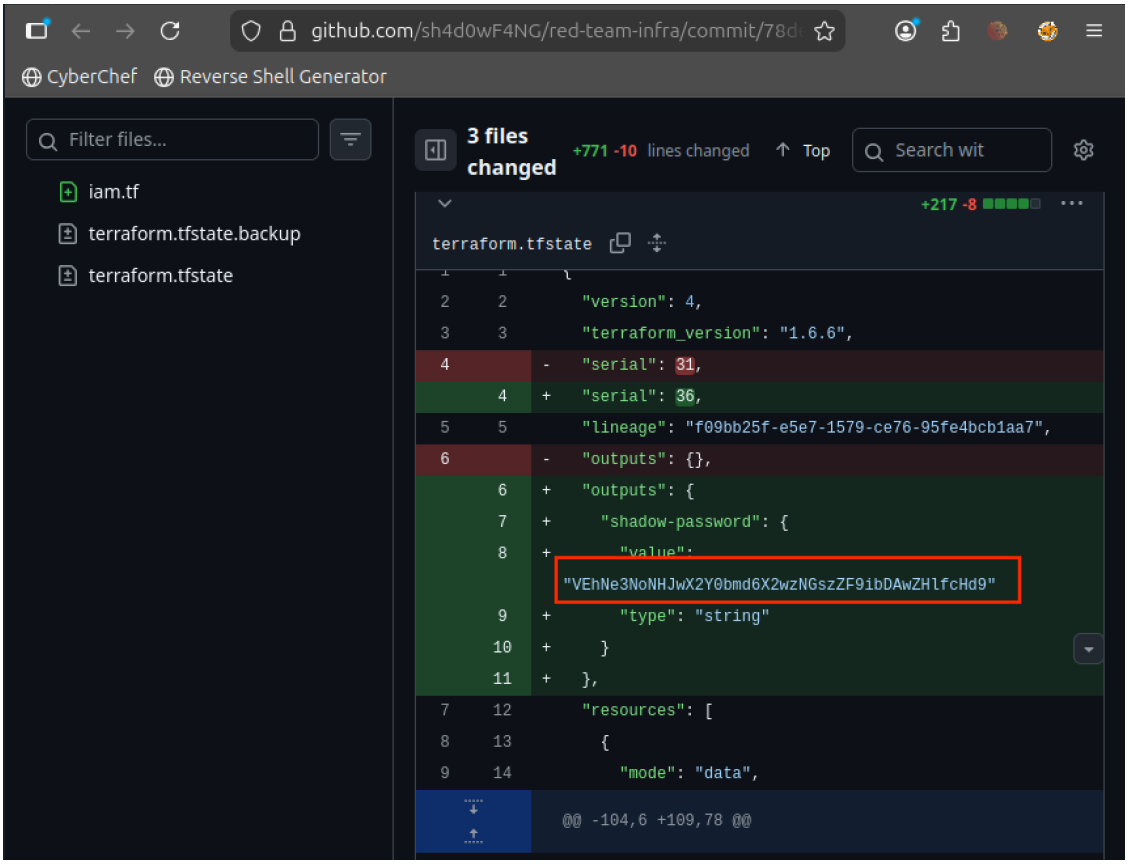
Inclusions:
- Terraform scripts for a resilient phishing infrastructure
- Updated Google Phishlet (evilginx v3.0)
- GoPhish automation scripts
- Google MFA bypass script
- Google account enumerator
- Automated Google brute-forcing script
- Cobalt Strike aggressor scripts
- SentinelOne, CrowdStrike, Cortex XDR bypass payloads

PRICE: $1500
Accepting all types of crypto
Contact me on REDACTED@protonmail.com
```

Seeing the instruction given in the THM box, I confirm among the 3 the red-team-infra is the one that has the last flag.

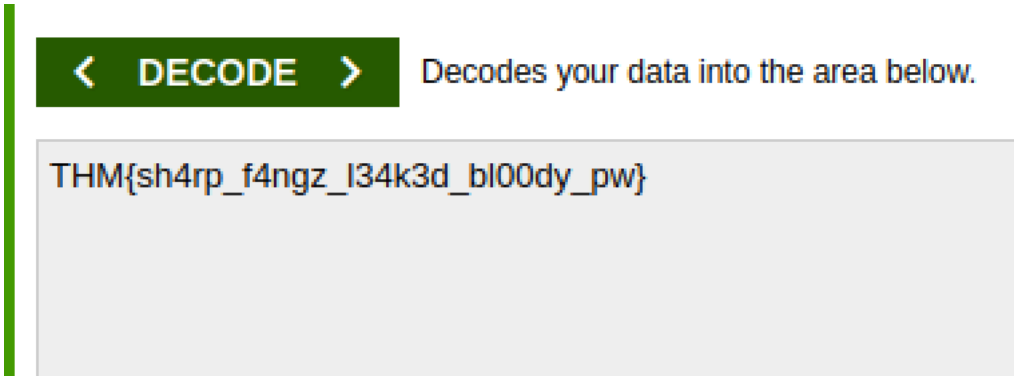


There were 9 commits in the repo and I investigated those files and found the last flag. The added automation commit had the flag.



Decoding the hash into base64 decoder gave the last flag required

ANSWER3 –



And now, I successfully completed the operation sliter room.
